

Prophet Data Transfer

Opening the door for every Prophet user

As the world of eCommerce and interconnectivity expand it is vital that your accounting system can take advantage of these new opportunities. Data Transfer for Prophet has been designed to allow it to transfer data between multiple Prophet installations as well as adopting the new worldwide standard of XML for data exchange. The ability to import information such as orders and invoices allows your accounting system to interface with ecommerce web sites or any other system in a predefined format that is both powerful and flexible.

Key benefits

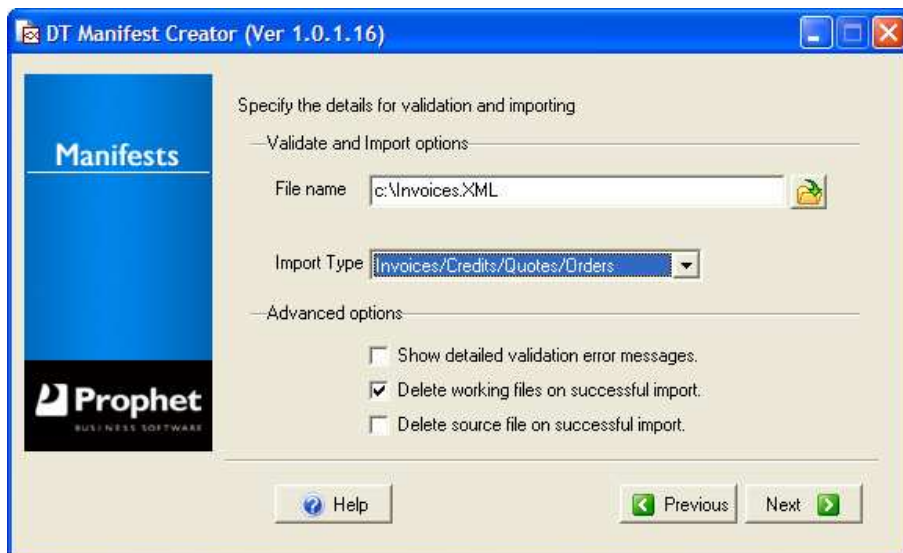

Prophet Data Transfer uses XML so that data can be reused in external applications such as Microsoft Office or any system that can read XML data. It also uses XML to allow data to be imported into Prophet such as sales orders, invoices and credit notes, stock information amongst other key accounting information.

- XML data allows for ultimate flexibility
- System validation ensures that only valid data will be imported into your accounting data
- XML export to data islands for off line business analysis of your data

- Import and Export data from user defined Attache FlexiData
- Optional un-attended and scheduled import and export of data
- Tight integration with Prophet security system to protect your accounting data

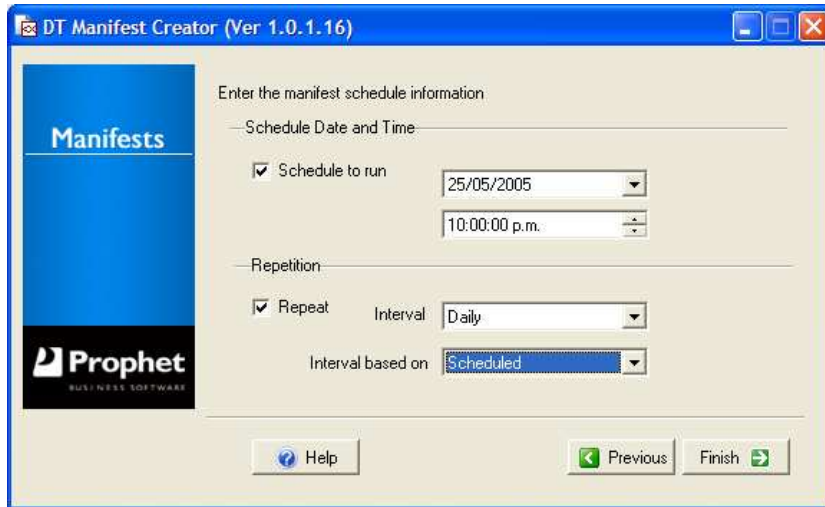

Simple Wizard based selection of Import or Export

Keeping things simple is the key. Prophet Data Transfer takes the pain out of this technical process by walking the user through a series of options with a wizard.

Optional un-attended Data Transfer

Most businesses will want to transfer data out of hours and on a repeating basis. Using this sub module you can set a repeating schedule for example export stock information every night.

Easily see what went wrong

Prophet Data Transfer validates all data before importing it into Prophet. This is a vital step to protect your accounting data. The included error viewer assists in analysing and summarising any data supplied that fails the validation process. This is huge step forward in productivity terms especially when implementing any integration with another system.

Upgrading from Prophet DOS FT?

No need to worry, Prophet Data Transfer handles backwards compatibility to get you started. Start with your existing transfer format and transfer to XML when you are ready.

XML is the present and future of data exchange

With XML now well established as the industry standard for data exchange it is vital that your accounting system can keep up with industry. Prophet Data Transfer uses XML as its primary exchange format so that you have ultimate flexibility in how you transfer data. Using industry standards is the key to this success. We do not enforce our own proprietary format, using XSLT you will be able to transform Prophet XML into any format you need.

Typical Uses

Whenever you need to link to an external application...

- Web Sites for eCommerce
- Point of Sale systems
- Customised invoicing systems

When you want to share data with other Prophet systems...

- Replicate data between branches
- Transfer data from one Prophet system to another
